

Advanced Test Facility – from concept to final design

- left:
first sketch of concept
- center:
further elaborated outline
- right:
3-D view of final design

Simulation of spray, combustion and emissions formation

- engine application examples: temperature distributions on vertical (four-stroke) and horizontal (two-stroke) cuts through combustion chamber (images scaled according to effective dimension ratios)

- RTA58T-B (right)

- W20

- W46
