

# HERCULES Task 8.1: After-treatment Methods

- Development of practical and reliable methods for emissions monitoring in service.
  - On-board measuring equipment to be tested at WCH in the course of this year.
- Extension of emissions measuring technologies for single-cylinder measurements.
  - Application of instrumentation at the testing facility WCH within the course of the second project year.
- Further development of NTP (non-thermal plasma) and WS (wet scrubbing) technologies, including lab tests under real engine exhaust conditions.
  - Scrubber tests are ongoing
