

TASK 8.2: New measurement methods

Objectives

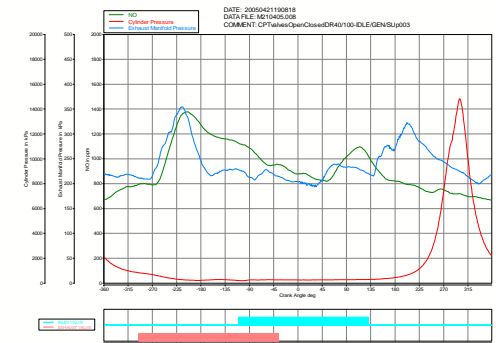

- Extension of emissions measuring technologies for individual cylinder measurements of a multi-cylinder marine diesel engine
- Development of practical and reliable methods for emission monitoring

Highlights

- Identification of emission measurement equipment for on-board use complying with IMO Annex VI requirements complete
- Prototyping, construction and setup procedure for on-board measurement equipment complete
- A special sample transfer tube was designed for individual cylinder NO measurement, tests performed
- A special test bench was constructed for evaluation of characteristic parameters of equipment

Test set-up for on-board measurements

Individual cylinder NO measurement with new designed sample transfer tube
